NEW GUIDED MISSILE
UNVEILED BY NAVY

WASHINGTON, March 30—(AP)—The Navy unveiled today for the first time a guided missile that can be fired from ships and submarines and may become the world’s deadliest undersea weapon for an invader of the United States.

A statement at the same time said that the 1,200-ton weapon, designed to sink submarines and destroy warships, was a major new weapon in the fight against undersea defense.

The missile, a naval weapon, was shown to the press today in a demonstration off the coast of Virginia. It is said to be able to sink submarines and destroy warships in the fight against undersea defense.

The Navy said the missile is a solid-fuel rocket with guidance and control systems and a warhead that can be launched from ships and submarines.

The demonstration was the first time the Navy has shown the missile to the public. The Navy said the missile is a solid-fuel rocket with guidance and control systems and a warhead that can be launched from ships and submarines.

Federal Agent
In Sale of Air

WASHINGTON, March 30—(AP)—A government agency has sold the American Tobacco Company a special type of a guided missile, the Navy said today.

The Navy said the missile, a guided missile, is designed to sink submarines and destroy warships in the fight against undersea defense.

The Navy said the missile is a solid-fuel rocket with guidance and control systems and a warhead that can be launched from ships and submarines.
